

Healthcare

GuardRFID is a proven expert in interoperable real-time location systems (I-RTLS™) driving the next generation of security & compliance applications in healthcare, industrial & commercial environments.

Industrial

With indoor & outdoor installations around the world, GuardRFID helps organizations achieve the protection, compliance, & efficiencies they require when it comes to their people & assets - today & tomorrow.

Commercial

allguard

real-time location

AllGuard is the most robust multi-purpose real-time location platform offering superior flexibility, interoperability & performance.

real flexibility

- Widest range of “Pick-N-Go” applications including industry-leading TotGuard Infant & Pediatric Security
- Security, safety, compliance & I-RTLS all in one integrated system
- Widest range of the smallest, toughest, longest-lasting tags
- Both long-range location & instant choke point detection

real interoperability

- Unparalleled standards compliance & certification
- Ready-to-go integration with complementary systems (e.g. CCTV, Access Control)
- An easy-to-work-with API

real performance

- Strongest immunity to wireless interference
- Proprietary location algorithms for the ideal balance of accuracy & cost
- Proven for high-density tag deployments with very fast system response & virtually unlimited potential for system expansion

real visibility

real-world, real-time location in action

1 MULTI-DEPARTMENT INSTALLATION

Real-time infant & patient security

CHALLENGE

The hospital's outdated infant & patient security system was having too many false alarms, didn't work properly & needed replacing.

SOLUTION

TotGuard Infant Security (with additional patient & asset tags) installed in the NICU and PICU covering 3 floors & 11 elevators.

2 CROSS-SYSTEM INTEROPERABILITY

Real-time infant security with advanced system integration

WHY GUARDRFID?

Met all of the customer's 5-point criteria: latest technology, reliable, flexible, cost-effective & customizable.

IMPACT

Improved, hassle-free infant & pediatric security with almost zero false alarms, faster workflow & improved patient care.

CHALLENGE

The hospital & Security staff wanted one integrated solution to manage patients, users & security events.

SOLUTION

An extended version of TotGuard Infant Security integrating with existing ADT, Active Directory, CCTV & access control systems.

WHY GUARDRFID?

GuardRFID is the only solution that offers this level of integration with existing healthcare & building automation systems.

IMPACT

Automated patient profile entry & user management freed precious time for patient care & Security staff benefited from centralized patient & access control alarm monitoring.

3 CROSS-FACILITY TRACKING

Real-time staff duress & security

CHALLENGE

A 17-hospital group wanted a single interconnected system (vs. the 17 separate systems they had) for real-time staff duress with automated inter-facility staff transfers.

SOLUTION

Enterprise version of AllGuard Staff Duress & Safety using a single server in their data center to support all 17 locations across the region.

WHY GUARDRFID?

Other staff tracking & security systems would not recognize staff or patients transferring from location to location.

IMPACT

Automated staff tag "roaming" & real-time tracking & visibility within & between facilities saving hospital & Security staff time & hassle.
