

# Argus AllGuard™ Integration with C•CURE 9000™

## FEATURES:

- Seamless integration with C•CURE 9000 security and event management system
- Custom active RFID/RTLS events creation in C•CURE 9000 with configurable actions
- Argus AllGuard event annunciation and acknowledgement within C•CURE 9000 application with auto-acknowledgement in Argus AllGuard
- Automatic recovery from Argus AllGuard or C•CURE 9000 system operation or communication disruptions

## DESCRIPTION:

GuardRFID's Argus AllGuard Middleware engine integrates with the Software House C•CURE 9000 Access Control system using a custom interface module developed by GuardRFID that is embedded within the C•CURE 9000 product. This integration enables the two products to work seamlessly with each other, the Argus AllGuard platform providing the Active Tag network and event management capabilities while C•CURE 9000 providing Access Control functionality.

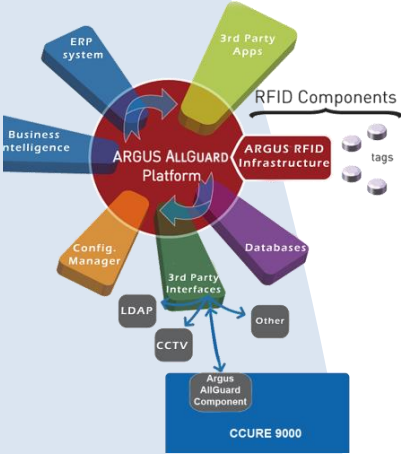

Argus AllGuard events presentable in C•CURE 9000 are as follows:

Argus AllGuard Event	Description
Exit	Tag detected at the portal
Tag Presence	Tag present in certain area on the floor plan
Checkpoint	Tag detected at certain pinpoint location
Home Area Mismatch	Tag detected in any other area except their Home Area
Tag Tamper	Tag removed from patient without authorization
Tag Loiter	Tag detected at the portal for prolonged period of time (perimeter secured)
Node Offline	Infrastructure device communication problem
Duress	Staff member call for help
Man Down	Man Down alarm declared by a Staff Tag worn by a staff member

C•CURE 9000 versions supported: 2.02, 2.20, 2.50
