

License for Lightweight Directory Access Protocol (LDAP)

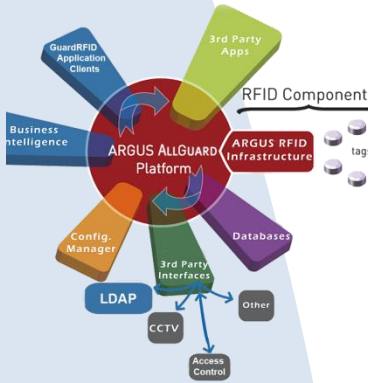

FEATURES:

- Seamless Integration with GuardRFID's Argus AllGuard Server
- Fully compliant with Lightweight Directory Access Protocol
- Automatic Validation and Synchronization when new users added
- Permission management for individual users and groups

DESCRIPTION:

Argus AllGuard Server provides the interface to directory services (including Windows based Active Directory) using the LDAP protocol, for the purpose of providing access to Argus AllGuard client applications for the designated directory users which utilize directory services as a single sign-on mechanism.

Argus AllGuard permission management allows users to be assigned into groups, each with its own set of customizable privileges (e.g. Users, Supervisors, Administrators, etc.).

SPECIFICATIONS:
